

Disability free life expectancy in Iran

Ali Pezhhan*

Abstract

The study was intended to examine and estimate the disability free life expectancy for Isanian people based on 2006 data. The data were taken from SCI and ASDR from National Organisation for Civil Registration. Findings revealed that the disability free life expectancy for males and females taken together was 76 years. It was 74 years for males and 78 years for females.

Key words: Handicap, life expectancy
